INTRODUCTION

This issue of Divisional Statistics is the fifth of a series, which is designed to satisfy the increasing demands of statistical users for information concerning various areas of the State.

Previous issues have contained data for areas of the State delineated as statistical divisions and subdivisions, which were themselves mainly amalgamations of local government areas. The boundaries of these divisions and subdivisions were determined within the Australian Bureau of Statistics after extensive consultation and advice from known users of statistical data and other parties interested in regional analysis. They were designed so that information would be presented for areas of interest while also maintaining a high degree of rationality in the groupings used.

Thus, these statistical divisions represented closely allied and meaningful areas of production and community of interest. Even though homogeneity and community of interest have always been regarded, somewhat loosely, as prime determinants of regional groupings, an attempt was made when formulating these statistical boundaries to give a more precise meaning to the items used and to clarify what constitutes a region. Factors taken into account were differential living zones, patterns of retail shopping, location and nature of industry, transport routes, provincial newspaper circulation, coverage of provincial radio and television stations, spheres of activity of cultural groups and sporting associations.

Until recently there was little uniformity in the regions used by various organisations in undertaking their own functions, with Government departments and authorities and private organisations determining their own regional boundaries. This led to at least two important difficulties, namely:

- (1) Planners etc. interested in the overall development of an area found it exceedingly difficult to obtain a complete picture of the existing services and conditions in that area. When contacting individual Departments, they found dissimilarities in the areas used which often led to an inability to obtain the required information on a consistent basis;
- (2) The task of the Statistician in providing required statistical information was made virtually impossible with each organisation requiring statistics for its own arbitrarily designed areas.

In an attempt to overcome these problems, the Committee on Uniform Regional Boundaries for Government Departments (CURB) was established to investigate and report on:

"the advantages and disadvantages of requiring Government Departments with, or intending to develop, regional operations, to adopt uniform regional boundaries (and) if uniform regional boundaries are considered desirable, the Committee should recommend the criteria to be used in establishing boundaries; (and) the boundaries to be adopted".

The Deputy Commonwealth Statistician at that time (Mr D.L.J. Aitchison) was appointed as a member of the CURB Committee. He was able to present criteria used by the Bureau in delimiting previous statistical boundaries within South Australia.

Recommendations of the CURB Committee have been accepted by the Bureau and from 1 July 1976 the Bureau has altered previous statistical divisions and subdivisions to those described on pages 7-14.

The new statistical divisions are not, in every case, identical with regions prepared for use by the CURB Committee. The Adelaide and Outer Adelaide Statistical Divisions comprise four CURB Regions - Central Northern, Central Western, Central Eastern and Central Southern. Statistical information for these four CURB regions can be obtained by aggregating subdivisions of these two Statistical Divisions. For example Urban Southern subdivision of the Adelaide Statistical Division plus Rural Fleurieu subdivision of the Outer Adelaide Statistical Division is equal to the Central Southern CURB Region.

Since the CURB regions now form the basis of the Bureau's new statistical divisions and subdivisions it is sufficient here to briefly examine CURB criteria for delineating regions. Also, the descriptions of statistical divisions which follow later will precis the regional descriptions of the CURB Committee Report.

Regions were delimited by the CURB Committee (and hence by the Statistician) using two complementary approaches. Firstly, areas could be determined that constituted formal regions. These were distinguished by the relative homogeneity of selected aspects of the area. Specific criteria examined in this regard were:

- population distribution, density and change,
- production statistics,
- dominant occupations, industrial and rural,
- socio-economic status: ethnicity, family status,
- physical characteristics, relief, soils, climate, water availability,
- existing administrative, planning and institutional boundaries,
- existing political boundaries (e.g. local government),
- character of the urban foci or nodes.

An alternative approach used was to determine regional boundaries based on a nodal concept. Thus, nodal regions were defined based on the interaction of functional linkages with usually the regions having some nodal or focal point. In this case, criteria examined by the Committee included.

- government department service areas,
- newspaper circulation,
- telephone traffic,
- retail trading flows,
- service areas for other commercial purposes,
- traffic flows,
- population movement, temporary as in commuting and leisure trips,
or more permanent as in migration, both internal and external.

Since these approaches are to a large extent complementary, all the Committee's regions, both urban and rural show a combination of formal and nodal features. After first identifying the broad patterns of the formal attributes throughout the State, the nodal attributes as suggested by shopping patterns, newspaper circulation etc. were examined to either reinforce or else modify the original proposals. The nodal attributes were very important in delimiting the country regions.

It can be seen that there were many similarities in the way the CURB Committee delimited its regions compared with what the Bureau did to determine its old statistical divisions. Thus, it is not surprising to find that there is a deal of comparability between the old statistical divisions and those introduced here based on the CURB regions.

The basic framework of the old and new systems for obtaining statistical divisions remains the same. In both cases, the divisions and subdivisions are mainly amalgamations of complete local government areas. Therefore it is possible to obtain a broad comparability over time based on the new boundaries by simply regrouping the local government area data contained in earlier issues of this bulletin. Such comparisons are valid for all metropolitan areas but because of the inclusion of some unincorporated areas from the north of the State (which was formerly a separate distinct region) with regions other than the new Far North Statistical Subdivision, it will not be possible to obtain an exact comparison for some country areas. However the unincorporated areas involved in this reshuffle are not densely populated and have little economic activity, which should enable users of the data to make fairly accurate comparisons.

The Adelaide Statistical Division retains exactly the same boundary now as under the old area groupings. Originally introduced by the Bureau as a basis for the publication of the 1966 Population Census results, this area boundary has remained constant since then.

B.E. LEONARD
DEPUTY COMMONWEALTH STATISTICIAN
AND GOVERNMENT STATIST

DESCRIPTIONS OF DIVISIONS AND SUBDIVISIONS

ADELAIDE STATISTICAL DIVISION

The Adelaide Statistical Division embraces the centre of population, secondary industry and commerce of the State. It is bounded on the west by the sea, the north by the Gawler River and the east and south by the Mount Lofty Ranges.

Soils are mainly hard red duplex soils (red-brown earths) but there are areas of hard yellow duplex soils (podzolic soils) in the cooler hills east of the city and hard brown calcareous earths on the plains north of the city. A large part of the area of the Division has been cleared for urban and agricultural purposes. In the areas not cleared natural vegetation varies from open woodland of the savannah forest type (peppermint and blue gum) on the plains and lower foothills to stringy bark in the higher ranges. Rainfall varies considerably throughout the Division with average annual falls of 400 millimetres to 510 millimetres on the plains to the north and west of the city and along the coastal fringe to the south. Recordings are generally between 530 millimetres and 690 millimetres in the foothills to the south-east of the city, and in the northern and southern sections of the hills increasing to 760 millimetres or more with a maximum of approximately 1,200 millimetres at Stirling in the highest part of the Ranges.

Rural activity is largely confined to the outer areas of this Division with emphasis on those products which are consumed by the city dweller e.g. milk, vegetables and fruit with areas of vineyards to the south.

OUTER ADELAIDE STATISTICAL DIVISION

Barossa Statistical Subdivision

Included in this Subdivision are the northern extremes of the Mount Lofty Ranges and the Barossa Valley. The Subdivision extends westwards to Gulf St Vincent encompassing the area to the north of the Adelaide Plains.

The hills regions have large areas of shallow soils and rocky outcrops while the valleys consist mostly of hard red duplex soils (red-brown earths), whereas the plains to the west contain sandy surfaced brown calcareous earths (mallee soils). Natural vegetation varies considerably throughout the region ranging from river red gum and stringybark on the hills through savannah woodlands, (principally blue gum and sheoak) to various mallee eucalypts. Average rainfall varies between 300 and 660 millimetres with the higher falls in the Barossa Valley.

The Barossa Valley is intensively planted to vineyards and the area produces a large proportion of the wine manufactured in the State. The remaining area of this Subdivision is devoted to cereal growing and sheep farming.

Kangaroo Island Statistical Subdivision

In addition to Kangaroo Island itself this Subdivision includes a few small islands around its coastline.

Soils are mainly gravelly, hard yellow duplex soils with calcareous sands and shallow red-brown sandy soils on limestone along the southern coast. Natural vegetation consists of mallee, sheoak, teatree, wattle, honeysuckle and yacca. Average rainfall varies from 760 millimetres on the western end of the plateau to 460 millimetres in the Kingscote area.

Sheep is the main industry of this Subdivision with prime lambs and meat cattle also being significant; some cereals are also grown in the drier areas. Fishing, both commercial and recreational, is an important industry in this area. The entire western end of the Subdivision is one of Australia's largest flora and fauna reserves.

Onkaparinga Statistical Subdivision

The hills of the central Mount Lofty Ranges extending eastwards to their extremities constitute this Subdivision. The topography is naturally rugged with steep hills characterising the area.

Soils consist of a variety of hard yellow duplex soils including ironstone gravelly forms, deep leached sands and hard red duplex soils. Natural vegetation includes stringy bark, candlebark, blackwood, blue and red gum, together with a rich array of associated sclerophyllous shrubs. The region receives a high annual rainfall (up to 1,020 millimetres along the western border).

Surrounding the Adelaide Hills communities of Mount Barker, Hahndorf, Oakbank, Nairne and Woodside are fertile agricultural areas used for dairying, horticulture and grazing. Most of this agricultural land lies within the watersheds of metropolitan reservoirs, within which there are strict controls on subdivision and development.

Fleurieu Statistical Subdivision

This Subdivision contains the hills and plains of the southern Mount Lofty Ranges through to the coast bordering the Southern Ocean including the western lakes district of Lake Alexandrina. Throughout, the topography is characterised by rolling hills and undulating country.

In the range area the soils consist of hard yellow and red duplex soils while brown calcareous earths predominate in the lakes district. Natural vegetation includes river red gum, blue gum, peppermint, sheoak and many types of shrubs and grasses. Intensive pine plantations have replaced large areas of natural forest. The region receives a relatively high annual rainfall (ranging from 330 millimetres in the south to 850 millimetres in the north).

The main activities in this predominantly rural Subdivision are dairying, meat and wool production while some wheat and barley are grown on the plains surrounding Strathalbyn.

YORKE AND LOWER NORTH STATISTICAL DIVISION

Yorke Statistical Subdivision

Yorke Subdivision embraces Yorke Peninsula and a small area to the north extending as far as Port Broughton. The countryside is mainly flat to undulating and is predominantly arable.

Brown calcareous earths (mallee soils) and shallow loams on limestone predominate in this area but calcareous sands are found on the foot of the peninsula and hard red duplex soils in the north-central portion. Natural vegetation consists of various types of mallee eucalypts, shrubs and grasses. Native pine and broombush are interspersed in some areas, while dryland teatree and other small shrubs are found in association with the mallee in the southern part of the Subdivision. Annual rainfall ranges between 300 and 510 millimetres with the majority of the Subdivision receiving an average of more than 360 millimetres.

This is essentially a cereal, wool and prime lambs producing district with some diversification into cattle and pigs.

Lower North Statistical Subdivision

This Subdivision is characterised by alternate mountain ranges and broad valleys which tend in a north-south direction, with the western boundary being the Hummock Range rising to about 300 metres. The area extends eastward from this Range and includes the fertile areas surrounding Clare-Watervale, and further east, the Eudunda Range and its associated plains.

Soils in these ranges and valleys are hard duplex varieties (red-brown earths) and cracking clays are present. In the uncleared areas the natural vegetation consists of various mallee eucalypts, shrubs and grasses interspersed with native pine, dryland teatree and in the wetter parts some river red gums. Average rainfall varies between 300 and 660 millimetres with the lower falls in areas near Gulf St Vincent and higher falls recorded around the Clare-Watervale area.

Wheat and sheep are the major rural activities throughout the region with sheep grazing predominating in the eastern portions and on the higher upland ridges. The Clare-Watervale area is extensively planted to vineyards.

MURRAY LANDS STATISTICAL DIVISION

Riverland Statistical Subdivision

Soils are sandy brown calcareous earths (mallee soils) although near the River Murray there are shallow brown soils over limestone and grey clays along the river flats. Natural vegetation is predominantly mallee eucalypt, acacia and dryland teatree with scattered patches of native pine and sheoak. Average rainfall varies between 200 and 480 millimetres with the higher falls occurring in the extreme west of the Subdivision.

Irrigation areas are scattered along the River Murray, in many cases extending no further than 3 or 5 kilometres from the river. These areas contain extensive orchards, both citrus and stone fruits, and produce over half the State's total production of these items. Large areas are also planted with vines, the grapes from which are used mainly in the production of wines and brandy with the remainder being dried. Cereals are grown in the mallee region to the south of the river and in the area adjacent to the Eudunda Range while sheep raising is spread throughout the Subdivision. Industry in the Subdivision is largely confined to processing the agricultural produce of the river area e.g. wineries, fruit canning, fruit packing.

Extending from the Eudunda Range eastward to the South Australia-Victoria border the Riverland Subdivision includes areas up to 60 kilometres north of the River Murray and the typical mallee country to the south of the River.

Murray Mallee Statistical Subdivision

This Subdivision extends from the lower reaches of the River Murray to the South Australia-Victoria border. The north-western side of the area is made up of the steep slopes of the ranges as they fall away to the river while the remainder is more typically mallee and undulating. Most of the lagoon known as the Coorong makes up the south-western boundary and the south-eastern corner forms part of the Ninety Mile Plain.

The soils consist of sandy brown calcareous earths with light drifts brown sand rises interspersed with sharper rises: there are some sandy duplex soils and deep leached sands in the south together with dark clay soils along the river flats. Natural vegetation is mainly mallee eucalypt, dwarf native pine, broombush and wattle together with shrubs and grasses. Average rainfall varies between 250 and 430 millimetres with the higher falls recorded near the coastline and becoming less reliable in the north of the Subdivision.

There are large numbers of dairy cattle concentrated on the lower reaches of the River Murray and the reclaimed river flats. In the balance of the Subdivision, cereal crops tend to be grown mainly on the western sides of the river with sheep grazing predominating on the eastern side. Barley is also grown in the southern areas nearer the South Australia-Victoria border. Secondary industry is mainly confined to factories processing the agricultural products of the area e.g. milk processing, butter manufacturing, flour milling, but there is some production of agricultural implements.

SOUTH EAST STATISTICAL DIVISION

Upper South East Statistical Subdivision

The region between the coast and the South Australia-Victoria border with the northern boundary near Keith and the southern boundary just north of Penola constitutes the Upper South East Subdivision. The area is characterised by many dunes and ridges that generally lie parallel to the coast.

Deep leached sands are associated with the dunes of the north while in the south there are considerable areas of dark clay soils. The Subdivision encompasses part of the 'ninety mile desert' scheme where previously inferior sandy yellow duplex soils have been changed to highly productive soils by the use of superphosphate and trace elements. Natural vegetation consists of heath, mallee eucalypt, yacca, dwarf honeysuckle and broombush in the north grading through to red, blue, pink and swamp gum in the south. In the north the rainfall varies between 400 and 510 millimetres with a gradual increase to 610 millimetres in the south.

The country is mainly devoted to grazing with sheep distributed throughout and cattle concentrated in the higher rainfall areas to the south. Crops are more important in the drier northern area where wheat, barley and considerable quantities of oats are grown. Southern rock lobster is taken by pots in the coastal waters adjoining this Subdivision.

Lower South East Statistical Subdivision

The south-east corner of the State, south of Penola, forms this Subdivision. The country is generally undulating but interspersed with ranges of low hills which run parallel to parts of the coastline.

Considerable areas of dark clay soils occupy the plains between the ranges. As there is virtually no natural drainage, extensive artificial drainage has been necessary to reduce the level of the water table to permit cropping and the cultivation of pasture. The natural vegetation consists of red, blue and swamp gum with native grasses. Average rainfall varies from 610 millimetres in the north through to 790 millimetres in the extreme south.

With its high rainfall and fertile soils, the majority of this area has been sown to pasture, making year-round grazing possible. This has led to the development of substantial fat lamb, beef, dairying and dairy products industries. The sawmills and paper and by-products factories in this Subdivision use large quantities of softwood which comes from the extensively planted *pinus radiata* forests of the area. In the coastal waters southern rock lobster is an important product.

EYRE STATISTICAL DIVISION

Lincoln Statistical Subdivision

This Subdivision takes in all but the north-western areas of Eyre Peninsula and extends further north to the Gawler Ranges. There are several ranges of hills in the Subdivision with peaks ranging in height from 150 to 495 metres. Along the west coast large areas are taken up by salt lakes.

Soils vary considerably, with red-brown sands on limestone in the west and sandy yellow duplex soils (red-brown earths) in the east, brown sands in the centre and brown calcareous earths in the north-east. Natural vegetation is mainly mallee eucalypt and broombush with shrubs and grasses, but there are areas of sugar gum with bottle-brush, heath and acacia along with isolated red gums. While average rainfall varies between 280 and 610 millimetres, the majority of the Subdivision receives less than 510 millimetres.

Cereal crops dominate the Subdivision's production with nearly 400,000 hectares sown, while sheep are raised, both for wool and prime lamb markets. Fishing is a major industry in the Subdivision with tuna being the most important catch. Port Lincoln, the largest town in the Subdivision, provides bulk handling facilities to dispose of the crops, a large abattoir to facilitate the processing of export lambs, and a fish cannery.

West Coast Statistical Subdivision

The West Coast Subdivision embraces the north-western areas of Eyre Peninsula and the far west coastal region. In the east the land is gently undulating merging into the flat Nullarbor Plain on the far west coast which rise 70 metres from the sea.

Soils vary from thin calcareous loamy soils on the limestone plateau of the Nullarbor Plain, to brown calcareous earths in the central and eastern areas with red-brown sandy soils in the south-east. East of the Nullarbor Plain natural vegetation consists of mallee eucalypt, broom-bush, saltbush, bluebush and open woodlands of sheoak and teatree. The Nullarbor Plain, while treeless, maintain vast open expanses of scattered saltbush and bluebush. Average rainfall varies from 400 millimetres east of Ceduna to less than 200 millimetres in the far west.

The area under cultivation is devoted exclusively to the growing of cereal crops (in the south-east) and pastures for grazing sheep.

NORTHERN STATISTICAL DIVISION

Whyalla Statistical Subdivision

Whyalla and the iron ore areas of the Middleback Ranges together with the arid lands in the west bounded by the Gawler Ranges and in the north by the salt lakes, Lake Gairdner and Lake Macfarlane, form this Subdivision. The region is flat with low ranges in the west and north-west.

In the main, soils are brown calcareous earths with areas of shallow compact loamy soils in the north-west and crusty red duplex soils north of Whyalla. Average rainfall is less than 300 millimetres throughout and natural vegetation is typically scattered mulga, saltbush and bluebush.

The main feature of the Subdivision is the industrial centre of Whyalla where blast furnaces and steel works are supplied with iron ore from the neighbouring Middleback Ranges. The Whyalla shipyards are one of the largest in Australia where ships of over 50,000 tonnes have been constructed.

Pirie Statistical Subdivision

Lying east of Spencer Gulf and the southern and central Flinders Ranges, the Pirie Subdivision extends to the South Australia-New South Wales border. It includes the coastal plains around Port Pirie, and the plains and low-lying hills to the far east and north east.

A wide range of soils are present in the region - saline clay soils and brown calcareous earths on the Pirie Plains, red duplex soils in the western rural areas and brown calcareous earths and loams in the semi-arid far north and east. Natural vegetation varies considerably with the different climatic and topographic conditions of the region. The steep ridges and gorges near Mount Remarkable to the north-east of Port Pirie are heavily wooded and patches of savannah woodland; principally blue gum and native pine, can be found in south-western areas. Further east and north mallee eucalypts, shrubs and grasses together with open shrubby plains give way to saltbush and bluebush with scattered mulga. Average rainfall varies from 500 millimetres in the higher western areas to 150 millimetres in the north-east.

In the main, the country is devoted to sheep grazing but only sparsely towards the border. Crops are limited to the more climatically favourable south-western areas. At Port Pirie is the site of the world's largest zinc smelter, which treats lead, silver and zinc ores from Broken Hill (NSW).

Flinders Ranges Statistical Subdivision

As well as the Flinders Ranges, this Subdivision includes Port Augusta, the pastoral areas south of the Ranges and extends west to Lake Torrens, north to Marree and east to Lake Frome. The land varies from flat along the eastern boundary to the rounded hills and valleys in the south through to the mountainous peaks and rocky outcrops of the North Flinders Ranges.

Soils are chiefly of shallow calcareous loam but brown calcareous earths occur along the eastern perimeter and in the north soils are crusty red duplex soils. Some areas in the south have scattered savannah woodland (native pine) as natural vegetation while in the southern parts of the Flinders Ranges there are patches of eucalypt trees. In the northern areas mainly drought resistant shrubs and grasses survive the arid climate. Average rainfall varies from 400 millimetres in the south to 151 millimetres at Marree.

This Subdivision contains the town of Leigh Creek where sub-bituminous coal is mined by the open-cut method and almost the entire output of the field is used at the Port Augusta powerhouse to generate electricity. Rural activity is limited to sheep and cattle grazing in the southern areas of the Subdivision.

Far North Statistical Subdivision

The Far North Subdivision is the largest in the State. The whole area is fairly flat apart from the Musgrave Ranges in the north-west which in places exceed 1,000 metres.

No part of the Division receives more than an average annual rainfall of 200 millimetres; large areas receive no useful falls for very long periods and high daytime temperatures experienced over a large part of the year cause rapid surface evaporation. As a result, this region cannot support agriculture to any extent, but an area of more than 41 million hectares is leased for pastoral purposes and carries over 100,000 beef cattle and one million sheep.

The soils are varied in character, sometimes capable of growing vegetation but unproductive in the absence of adequate rainfall. In this Division are found the thin calcareous loam soils of the Nullarbor Plain, the desert sand hills, the gibber deserts, the sand plains and the spinifex areas. The native vegetation consists of those shrubby species which have become adapted to the climatic conditions of the region. The trees are scattered mulga with some native pines on the hills and areas of saltbush and bluebush. Large areas in the north-west and north-east are almost devoid of vegetation, being merely sand or gibber deserts.

Within the Subdivision are two notable industries - natural gas is piped to Adelaide from the Cooper Basin in the north-east, and extensive opal fields exist at Coober Pedy and Andamooka.

EXPLANATORY NOTES

1. DWELLINGS

Occupied Private Dwelling: For purposes of the population census, an occupied dwelling is defined as any habitation occupied by a household group living together as a domestic unit, whether comprising the whole or only part of a building.

Occupied Non-private Dwelling: Includes hotels, motels, boarding houses, hospitals and educational, religious and charitable organisations.

Unoccupied Private Dwelling: Includes a dwelling normally occupied but from which the usual occupants were temporarily absent on the night of the population census, a newly-completed dwelling not yet occupied, vacant dwelling available for sale or renting, and buildings constructed as dwellings but used for non-dwelling purposes on the night of the Census.

2. EMPLOYED PERSONS

Industry is defined as any single branch of productive activity, trade or service. All persons engaged in any such branch of economic activity are classified to the particular branch in question, irrespective of their own personal occupation within the industry. For example, a carpenter working for a retail store is classified to the industry of his employer; that is, commerce.

Occupation is defined as the type of work performed by an employed person.

3. DEMOGRAPHY

Births are allocated to the local government area or unincorporated area of usual residence of mother. Where the usual residence is not in this State the birth is coded to the location of the hospital where it occurred.

Deaths registrations are allocated to the local government area or unincorporated area of usual residence. People who normally resided in another State are coded to the area in this State in which the death occurred.

4. SCHOOLS

These statistics include particulars relating to special schools, the correspondence school and pre-schools attached to primary schools. Particulars relating to evening schools, business colleges, coaching establishments and institutions providing solely pre-school and kindergarten education are excluded.

The details for government schools have been derived from information supplied by the South Australian Education Department, while those for non-government schools have been obtained from a census of non-government schools conducted by this Bureau.

Teacher statistics include teaching staff, principals and head teachers, whether permanent or temporary, but exclude teachers-in-training, teachers on leave without pay and other teachers engaged wholly in advisory, administrative or other non-teaching duties.

5. RURAL INDUSTRIES

For 1975-76 the statistics are derived from the agricultural census returns, relating to approximately 25,000 holdings which utilised an area of land of 10 hectares or more, for the production of agricultural products (including fruit and vegetables) or for the raising of livestock (including poultry) and the production of livestock products. Holdings of less than 10 hectares are included where the legal entities operating those holdings have Estimated Values of Operations from agricultural activity, of \$1,500 or more.

The scope of the statistics for 1975-76 differs from earlier years, which included holdings of 1 hectare or more.

Area of Pasture relates to that area of lucerne, clovers (all kinds), rye grasses (all kinds), cocks foot, fescue, paspalum, phalaris, medics (all kinds), primrose, sudan and veldt used for all purposes.

Meat Cattle are those cattle kept mainly for the production of meat.

Milk Cattle are those cattle kept mainly for the production of milk or cream for sale.

6. MANUFACTURING INDUSTRIES

A Manufacturing Establishment is one predominantly engaged in an activity specified in Division C of the Australian Standard Industrial Classification but the data supplied for it cover (with a few exceptions) all activities at the location, including production of goods primary to another class of industry, selling and distribution activities and extraction of raw materials for use by the establishment. The term 'manufacturing' is used in the broad sense to relate to the physical or chemical transformation of materials or components into new products.

Since 1974-75 all single establishment enterprises employing less than four persons are excluded.

Number of Establishments: The number of establishments which were operating at the end of June 1975. These relate to manufacturing establishments as such and do not include the numbers of separately located administrative offices and ancillary units (such as storage premises, transport garages, laboratories, etc.). Details for separately located administrative offices and ancillary units are included in all other establishment details.

Persons Employed: Working proprietors and employees on payroll, including those working at separately located administrative offices and ancillary units.

Wages and Salaries: The wages and salaries of all employees of manufacturing establishments including those working at separately located administrative offices and ancillary units. Drawings of working proprietors are excluded.

Turnover: Sales of goods whether produced by the establishment or not, plus transfers out of goods to other establishments of the same enterprise, plus bounties and subsidies on production, plus all other operating revenue from outside the enterprise (such as commission, repair and service revenue), plus capital lease. Receipts from rent, leasing, interest (other than hire-purchase), royalties and the sale of fixed tangible assets are excluded.

Value Added: Turnover, plus increase (or less decrease) in the value of stocks, less purchases, transfers in and selected expenses.

It should be noted that while value added is the basic measure of an industry's contribution to total production it must not be inferred that when wages and salaries are deducted from value added, the whole of the surplus is available for profit. There are many miscellaneous expenses such as depreciation, workers' compensation insurance, other insurance, payroll tax, income tax, rates, advertising, interest on borrowed funds, bad debts and other sundry charges which are not taken into account in arriving at value added.

7. RETAIL TRADE

The 1973-74 Census included establishments classified to subdivision 48 of the Australian Standard Industrial Classification plus cafes, restaurants, licensed premises and hairdressing establishments in Division L but excluded bread and milk vendors, shoe repairers, door to door salesmen and organisations operating vending machines.

Number of Establishments: The number of establishments which operated at 30 June 1974. These relate to establishments as such and do not include the numbers of separately located administrative offices and ancillary units.

Persons Employed includes working proprietors at end of June 1974, employees (including part-time) on the payroll of the last pay period in June 1974, and unpaid members of the proprietor's family and other unpaid helpers working at least 15 hours during the last week of June 1974. Persons employed include those working at separately located administrative offices and ancillary units in the State.

Value of Retail Sales: Sales of new and used goods to final consumers for household and personal purposes. Excluded are takings from meals, accommodation, hairdressing, repair revenue, and sales of building materials, agricultural supplies and business equipment.

8. BUILDING OPERATIONS

The values of building commenced and building completed includes the value of additions and alterations of \$10,000 and over to existing buildings but the number of alterations and additions are excluded from the numbers of dwellings completed and under construction. Minor additions, alterations, repairs and renovations, and all construction activity such as railways, bridges, earthworks, water storage, etc. are excluded. Semi-detached houses and cottage flats are included in 'other dwellings'.

Value: The values shown represent the estimated cost (excluding cost of land) of new buildings when completed (see also 'Completions').

Commencement: A building is recorded as commenced when work on the foundation has begun.

Under Construction: Once commenced, even though work on it may have been temporarily suspended, a building is classified as 'under construction' until its 'completion'.

Completion: A building is regarded as having been completed when the contractor has fulfilled the terms of the contract or, in the case of an owner-built house, when the dwelling is either completed or occupied (whichever occurs first). However, the value in all cases is that of the building as a finished project as planned.

9. LOCAL GOVERNMENT FINANCE

Ordinary Services: Includes the general functions of local government authorities but excludes details of their trading activities such as electricity undertakings.

Rates & Penalties: Includes general rates, special or local rates and payments in lieu of rates.

Roads, Streets, etc.: Expenditure incurred by local government authorities only. Includes expenditure on drainage associated with roadworks.

SYMBOLS USED

Throughout this bulletin the following symbols have been used:

.. not applicable
